

ABSTRAK

Penelitian ini menganalisis dampak variabel *university environment support* terhadap variabel *entrepreneurial intention* dengan variabel *self-efficacy* sebagai variabel intervening. Objek penelitian yang digunakan pada penelitian kali ini adalah mahasiswa program studi manajemen Universitas PGRI Adi Buana Surabaya. Penelitian ini ialah termasuk penelitian kuantitatif. Kuisisioner digunakan sebagai teknik pengambilan data. Accidental sampling di gunakan sebagai metode sampling. Perhitunagn sampel menggunakan teori Roscoe dengan jumlah sampel adalah 105 orang. Data tersebut kemudian diolah dengan menggunakan software SmartPLS versi 04. Hasil anallisis penelitian membuktikan bahwa terdapat dampak signifikan negatif *university environment support* terhadap *entrepreneurial intention*, terdapat dampak signifikan dan positif *university environment support* terhadap *self-efficacy*, dan terdapat dampak signifikan dan positif *self-efficacy* terhadap *Entrepreneurial intention*, serta *university environment support* berdampak signifikan dan positif terhadap *Entrepreneurial intention* dengan variabel *self-efficacy* sebagai variabel intervening. Universitas PGRI Adi Buana Surabaya diharapkan untuk selalu memberikan *university environtment support* yang baik pada mahasiswa sehingga tumbuh kepercayaan diri pada mahasiswa untuk berwirausaha.

Keywords: *University Environment Support, Self-Efficacy, Entrepreneurial Intention*

ABSTRACT

This study analyzes the impact of university environment support variables on entrepreneurial intention variables with self-efficacy variables as intervening variables. The research object used in this research is the management study program students of PGRI Adi Buana University Surabaya. Research. This research is quantitative research. Questionnaires are used as data collection techniques. Accidental sampling is used as a sampling method. Sample calculation using Roscoe's theory with a sample size of 105 people. The data is then processed using SmartPLS software version 04. The results of the research analysis prove that there is a significant negative impact of university environment support on entrepreneurial intention, there is a significant impact of university environment support on self-efficacy, and there is a significant and positive impact of self-efficacy on entrepreneurial intention, and university environment support has a significant and positive impact on entrepreneurial intention with self-efficacy variables as intervening variables. PGRI Adi Buana University Surabaya is expected to always provide good university environment support to students so that students grow confidence in entrepreneurship.
