Kata Kunci: *Media Kartu Kuartet Satuan Waktu Matematika, Sikap Kerja Keras*

Telah dilakukan penelitian tentang pengaruh media kartu kuartet satuan waktu matematika terhadap sikap kerja keras siswa kelas V SDN Gayungan II Surabaya pada tanggal 21 November 2018 dan 22 November 2018. Penelitian ini bertujuan untuk meningkatkan sikap kerja keras serta nilai hasil belajar siswa dengan menggunakan media kartu kuartet satuan waktu matematika. Jenis penelitian yang dilaksanakan adalah penelitian eksperimen dengan rancangan “*One-Group Pretest-Posttest design*” yaitu penelitian yang menggunakan satu kelas eksperimen sebagai sampel penelitian kemudian membandingkan hasil belajar siswa kelas eksperimen tersebut sebelum dan setelah diberikan perlakuan, sedangkan populasi penelitian adalah kelas V dengan sampel penelitian yaitu kelas V-B.

Berdasarkan analisis dan pembahasan terhadap hasil penelitian, diperoleh hasil uji-t satu pihak dari hasil belajar siswa kelas eksperimen antara sebelum dan setelah diberikan perlakuan, didapatkan nilai t_{hitung} sebesar 17,59 dan t_{tabel} sebesar 2,04 dengan $db=31$ dan $\alpha = 0,05$. Maka dapat dinyatakan bahwa setelah diberikan perlakuan, hasil belajar siswa kelas eksperimen lebih baik daripada hasil belajar kelas eksperimen sebelum diberikan perlakuan. Sedangkan berdasarkan hasil observasi dan nilai *posttest* siswa didapatkan bahwa persentase jumlah siswa yang memiliki sikap kerja keras yang tinggi lebih besar daripada persentase jumlah siswa yang kurang memiliki sikap kerja keras.

Hasil penelitian ini adalah terdapat pengaruh penggunaan media kartu kuartet satuan waktu matematika terhadap sikap kerja

keras siswa kelas V SDN Gayungan II Surabaya, yang ditinjau dari hasil belajar siswa yang lebih baik setelah diberikan perlakuan daripada hasil belajar siswa sebelum diberikan perlakuan. Sedangkan dalam segi kinerja siswa, penggunaan media kartu kuartet satuan waktu matematika mampu meningkatkan sikap kerja keras siswa, ditinjau dari analisis hasil observasi aktivitas siswa selama pembelajaran berlangsung.

ABSTRAK

Susiloyeti, Nonik. 2019. *Effect of Media Time Mathematical Unit Quartet Cards on Hard Work Attitudes of Grade V Students of SDN Gayungan IISurabaya*.
Essay. Primary School Teacher Education Study Program.

Keywords: *Quartet card media mathematical time unit, Hard work attitude.*

Research has been conducted on the effect of quartet card media on mathematical time units on the hard work attitude of fifth grade students at Gayungan II Surabaya Elementary School on November 21, 2018 and November 22 2018. This study aims to improve hard work attitudes and student learning outcomes using quartet card media mathematical time unit. The type of research carried out was experimental research with the design of "One-Group Pretest-Posttest design" that is research that uses one experimental class as a research sample then compares the learning outcomes of the experimental class students before and after treatment, while the study population is class V with samples the research is the VB class.

Based on the analysis and discussion of the results of the study, obtained the results of the t-test of one party from the student learning outcomes of the experimental class between before and after being given treatment, obtained tcount of 17.59 and t table of 2.04 with $db = 31$ and $\alpha = 0,05$. Then it can be stated that after being given treatment, experimental class student learning outcomes are better than the experimental class learning outcomes before being given treatment. While based on the results of observations and student posttest values, it was found that the percentage of students who had high hard work attitudes was greater than the percentage of students who lacked the attitude of hard work.

The conclusion of this study is that there is the influence of the use of quartet card media on mathematical time units on the

attitude of hard work of fifth grade students of Gayungan II Surabaya Elementary School, which is viewed from better student learning outcomes after being given treatment than student learning outcomes before treatment. Whereas in terms of student performance, the use of quartet card media in mathematical time units is able to improve the attitude of students' hard work, in terms of the analysis of the observations of student activities during the learning process.
