THE USE OF AN APPLICATION RUNNING ON THE ANT COLONY ALGORITHM IN DETERMINING THE NEAREST PATH BETWEEN TWO POINTS

**Abstract**

A summary of the item's content. If the item has a formal abstract then that is what should be entered here. No complicated text formatting is possible.

Furthermore, it aims to use the architecture system, which consists of several stages, such as data collection, and management, which is carried out through three phases, including, parsing MySQL data to the JSP, then to Java, and lastly, managing the data using the ant algorithm in order to find the shortest pathway. The result was then examined, and it showed that this application is capable of detecting the shortest distance between two locations. Therefore, it will be beneficial to both the locals and tourists in a specific region.

**Abstract**

Being able to carry out tasks like moving from one point to another with great speed is highly needed in this 4.0 revolution era. Therefore, information technology is expected to provide a lasting solution to this problem. The aim of this research is to create an android application and website which runs on the Ant Colony Algorithm and is capable of
